## What is Claim d is:

- 1. A closed loop postage metering system comprising:
  - a meter provider infrastructure including a meter database;
  - a postal infrastructure in operative communication with the meter provider infrastructure, the postal infrastructure including equipment and processes for submission, processing, transporting and delivery of a mail piece;
  - a mailer system in operative communication with the meter provider infrastructure and the postal infrastructure, the mailer system including a postage meter, the postage meter accounting for and printing postage value for the mail piece and printing on the mail piece information identifying services requested for the mail piece;
  - wherein the postal infrastructure determines an adjusted postage value for the mail piece based on the occurrence of events related to the requested services during the processing the mail piece; and
  - wherein the postal infrastructure sends the adjusted postage value to the meter for the meter to account for the adjusted postage value.
- 2. The system of claim 1 wherein the meter provider infrastructure includes an events database and the postal infrastructure includes a planned events database and a transaction database used during the processing of the mail items.
- The system of claim 1 wherein the requested services are conditioned on the occurrence of at least one certain event.
- A method for processing mail items, the method comprising the steps of: creating a mail piece;
  creating a list of planned events associated with the mail piece;

- creating parameters and decision functions associated with the planned events:
- printing on the mail piece by a postage meter mail piece information including a unique identification of the mail piece, evidence of postage payment identification of the postage meter and services requested for the mailpiece;

inducting the mail piece into a postal infrastructure;

- scanning the mail piece to determine if one of the planned events has occurred;
- if a planned event has occurred obtaining the mail piece information with sensors in the postal infrastructure, the mail piece information including identification of the postage meter; and
- sending a message to the meter relating to the occurrence of the planned event, the message including the mail piece information.
- 5. The method of claim 3 comprising the further step of: accounting by the meter for the occurrence of the planned event.
- 6. The method of claim 3 comprising the further steps of:
  - if a planned event has not occurred obtaining the mail piece information with sensors in the postal infrastructure, the mail piece information including identification of the postage meter;
  - sending a message to the meter relating to the non-occurrence of the planned event; and
  - accounting by the meter for the non-occurrence of the planned event.
- 7. A method for managing postal workshare discounts, the method comprising the steps of:
  - prepare a batch of mail in a manner intended for the batch of mail to qualify for certain postal workshare discounts;
  - applying at least one of a unique mail piece identification or unique batch identification on each mail piece in the batch of mail;

inducting the batch of mail for postal processing;

- accounting in a meter for payment for the batch of mail based on an estimated workshare discount and submitting the payment;
- determining during the postal processing the actual workshare discount that the batch of mail is entitled to; and
- sending a correction discount amount to the meter to update the accounting in the meter.
